Report review: 

1. The samples in this report were received in good, acceptable conditions.
2. Percentage is for each group in total population.
3. Concentrations and percentages are rounded to the nearest two significant digits. Total percentage may not add up to 100% due to rounding.
4. MEA=2% malt extract agar.
5. All culture samples are incubated at $25\pm 0.5^{\circ}\text{C}$ unless otherwise indicated.
6. The detection limit of this analysis is one fungal colony. The quantitation limits vary from analysis to analysis and by air volume. Contact us to determine your quantitation limits.
7. For more information concerning results interpretation and the identified fungal taxa, please visit our website www.Prestige-EM.com.
